LIMITED a company registered in United Kingdom

Rising Bird is a multivendor e-commerce ecosystem deployed on the blockchain technology essentially to improve the interaction between buyers and seller on the internet mitigating third party influence and further promoting the actual usage of cryptocurrencies in all daily economical activities. These activities are not limited to the following logistics and transportation, decentralized remittance, immersive and virtual reality, staking and Defi.

Diving deep into details about blockchain or distributed ledger technology as widely called is an information base that is openly shared, repeated, and synchronized. To better comprehend the specialized parts of a blockchain, it is great to explain the idea through a model. At the point when a person stores an amount of cash into a financial establishment, the person trusts that the aggregate will be there until they choose to trade it for services and products.

The person trusts that the financial establishment will have an exact record of the exchange, like the sum remitted, individual that made the remittance, date, and time of the remittance. All the more extensively, society depends on the recorded archives, like banks or state run administrations, to keep up with and safeguarding the recorded activities of people or establishments.

Blockchain is in contrast with centralized vaults, it is a system that decentralizes the foundation of trust. A person stores assets into a computerized wallet and the worth is caught on the blockchain. Assuming this person buys a virtual art such as NFT, the exchange is caught in the blockchain alongside the change in reserve level in the computerized account. The bank isn't needed as a confided in outsider. The dependable record is recorded in the blockchain shared by every one of the gatherings on the organization.

Blockchain can be known as a distributed ledger where all transactional information are stored to remove any form of inaccuracies within the database structure. It can be characterized as a form of:

1. Record Keeping
2. Trustless or consensus ledger
3. Immutable to transaction alteration
4. Peer-to-peer decentralized network

Blockchains have three main cores:

Block: A list of recorded transactions over a period of time. Transactions can represent virtually any type of activity from registering a land deed to a single purchase. Any rules relating to the block itself are established when the network is first created. For example, the maximum number of transactions in a block or the size of each block can be limited.

Chain: When the block reaches its maximum size of transactions, it is chained or linked to the preceding block through a hash as described in the section below. The hash value of one block is inserted into the next block. This makes a link between the new block and the previous block. Repeating a hash function on an unaltered block of data will always generate the same fixed-length value. If a block of data is altered, the resulting hash output will be different. A user can then see the hashes are different and will know the original block has been altered and may no longer be trustworthy.

Network: The network is made up of nodes each containing a complete record of all transactions on a blockchain. No centralized "official" copy exists and no node is "trusted" more than another. The data integrity is maintained by the blockchain being replicated on all of the nodes.

Blockchain Smart Contracts

A smart contract is a contract that has been translated into the software language of the blockchain, stored on the blockchain, and can be autonomously executed by a triggering event. Once the requirements of the smart contract are met, the contract will automatically be executed and the resulting action will be stored and shared across the blockchain.

For example, an artist can sell a digital song at a certain price in an online music app. This agreement could be programmed into any Blockchain with the smart contract algorithm. The smart contract will automatically distribute payment to the songwriter when a user buys the digital song and capture the transaction in the blockchain which means the records are not deleted from blockchain, but are cryptographically redacted to block the data from general view.

The use of these smart contracts could potentially address record access, retention, disposition, and litigation hold requirements, depending how the blockchain rules, roles, and features are developed.

Licenses and endorsements are not guaranteed

Risingbird Multivendor Platform("Risingbird.co.uk") plans to work in full consistency with material laws and guidelines and utilize its best undertakings to get vital licenses and endorsements.

Administrative licenses, as well as endorsements, are probably going to be needed in various significant locales in which pertinent exercises may happen.

This implies that the turn of events and carry out of the relative multitude of drives depicted in this whitepaper is not ensured. It is beyond the realm of imagination to expect to ensure, and no individual makes any portrayals, guarantees, or affirmations, that any such licenses or endorsements will be acquired inside a specific time period or by any means.

Accordingly, the drives depicted in this whitepaper may not be accessible in specific purviews, or by any stretch of the imagination. This could require rebuilding of these drives as well as its inaccessibility taking all things together or certain regards. Furthermore, the improvement of any drives is planned to be carried out in stages. During specific phases of advancement, the undertaking may depend on associations with certain authorized outsider elements.

In the event that these substances are not, at this point appropriately authorized in the applicable ward, this will affect the capacity of Risingbird.co.uk to depend on the administrations of that gathering.

Not a financial advice

This whitepaper doesn't comprise any venture exhortation, monetary guidance, exchanging counsel, or proposal by Risingbird.co.uk, its partners, or its separate officials, chiefs, supervisors, representatives, specialists, counselors, or advisors on the benefits of buying Rising Bird tokens nor should it be depended upon regarding some other agreement or buying choice.

Not a sale of securities

This whitepaper doesn't comprise an outline or monetary help offering report and is anything but a proposal to sell or requesting of a proposal to purchase any security, venture items, controlled items, or monetary instruments in any purview. Rising Bird tokens are not being organized or sold as securities at Risingbird.co.uk. Proprietors of Rising Bird tokens are not qualified for any rights in Risingbird.co.uk or any of its offshoots, including any value, shares, units, eminences to capital, benefit, returns, or pay in Risingbird.co.uk or some other organization or protected innovation related with Risingbird.co.uk.

In the event that these substances are not, at this point appropriately authorized in the applicable ward, this will affect the capacity of Risingbird.co.uk to depend on the administrations of that gathering.

Professional guidance

You are to consult an attorney, bookkeeper, charge proficient and additionally some other expert counselors as important before deciding if to buy Rising Bird tokens.

No guarantees

No portrayals or guarantees have been made to the beneficiary of this whitepaper or its counsels concerning the precision or culmination of the data, proclamations, feelings, or matters (express or suggested) emerging out of, contained in, or got from this whitepaper or any exclusion from this record or of some other composed or oral data or suppositions gave now or later on to any invested individual or their consultants.

The Rising Bird tokens, as imagined in this whitepaper, are being worked on and are in effect continually refreshed, including yet not restricted to key administration and specialized highlights. On the off chance that and when the Rising Bird tokens are finished, they may contrast altogether from the portrayal set out in this whitepaper

Translations

This whitepaper and related materials are given in English. Any interpretation is for reference purposes just and isn't guaranteed by any individual. No affirmation can be made regarding the precision and culmination of any interpretations. On the off chance that there is any irregularity between an interpretation and the English form of this whitepaper, the English rendition will win.

Restricted transfer

This whitepaper should not be taken or communicated to any purview where dispersion or spread of this whitepaper is precluded or confined.

Third-party information

This whitepaper contains information and references got from outsider sources. While the administration accepts that this information are exact and dependable, they have not been dependent upon free review, confirmation, or investigation by any expert lawful, bookkeeping, designing, or monetary guides. There is no confirmation with regards to the precision, unwavering quality, or culmination of the information. Furthermore references in this whitepaper to explicit organizations, organizations, as well as potential use cases are for illustrative purposes as it were. The utilization of any organization or potentially stage names and brand names doesn't suggest any connection with, or proposal, or support of/by, any of those gatherings. All references to 'dollars', USD, or '\$' are references to the United States Dollars except if in any case expressed.

Website declaration

The perspectives and feelings communicated in this whitepaper are those of Risingbird.co.uk and don't mirror the authority strategy or position of any administration, semi-government, authority, or public body (counting yet not restricted to any administrative body) in any ward. This whitepaper has not been looked into by any administrative position.

INTRO DUCTION

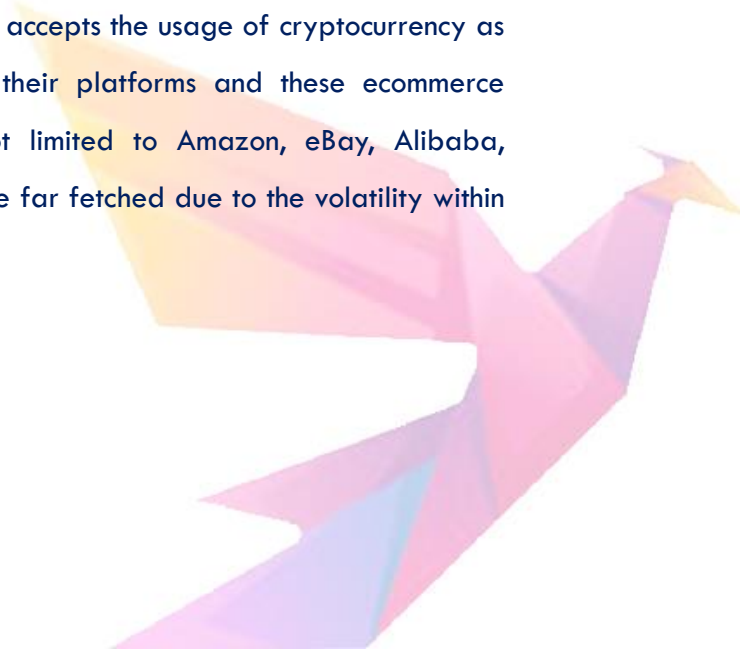

In the last decade cryptocurrency adoption has experienced an improved geometrical growth at over \$3trillion dollars all time high market capitalization in 2021. As this remarkable technology grows we expect immense diversification in its application and use cases most especially in logistics and transportation, digital art storage, financial remittance, e-commerce, gaming, artificial intelligence and many more.

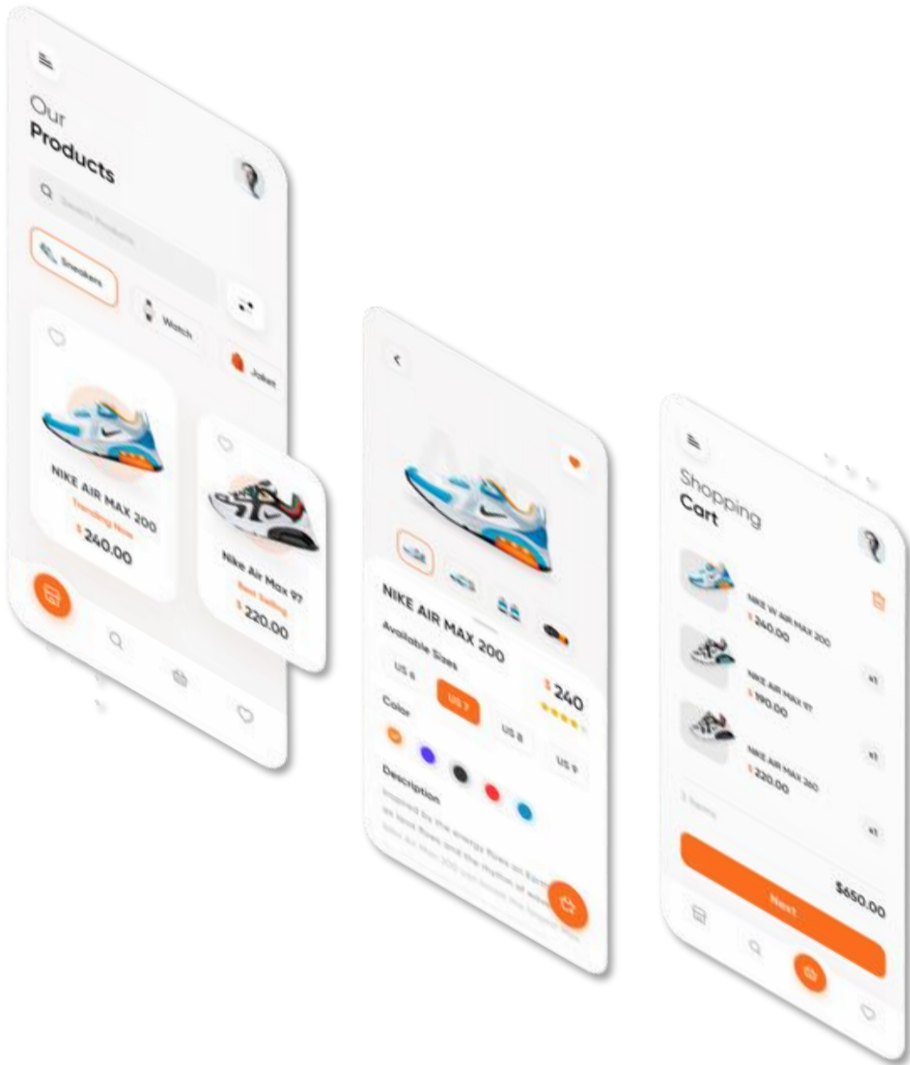

There have been multiple statistical reports that the real-time use case for cryptocurrency in the physical world rather than the internet is at a slow pace and it is very evident from the stive regulations from governments and traditional financial systems who sees the technology as a threat to there archaic model of operation.

Rising Bird is a project that is developed to mitigate the challenges faced by enthusiastic users of cryptocurrency by creating the first fully immersive ecosystem with 100% usage of cryptocurrency as its model of operation in metaverse, e-commerce, staking, logistics and transportation. it is evident that most ecommerce platforms accepts the usage of cryptocurrency as a mode of payment on their platforms and these ecommerce merchants include but not limited to Amazon, eBay, Alibaba, Walmart, these may not be far fetched due to the volatility within the technology.

INTRODUCTION

This is a multivendor blockchain based platform that unifies all her ecosystem products such as ecommerce platform, taxi app, metaverse, defi and staking there allowing consumers to enjoy all online benefits of cryptocurrencies and its physical use case applications such as shopping seamlessly, securely, and cost-effectively, transiting from one location to another, earning by staking, purchase and buying of digital assets such as properties, art collections and so on.

Furthermore rising bird serves as the ultimate connection between the cryptocurrency space and the real world to ensure users who for sometime in the past have been unable to make purchases and sales while using their digital assets. With the technology infrastructure offered by Rising Bird, digital asset users (currently top100 as per coinmarketcap) would now be able to shop on the marketplaces and enjoy shipping and up to 10% discounts.

Risingbird.co.uk gives a proficient, blockchain-based without compromising security and make the payment system transparent. The Risingbird.co.uk platform will fill in as the cutting edge ecommerce, logistics and staking platform. There are no geographical limitations or public lines, the \$rising coin endeavors to draw attention to the present reality with digital forms of money through future-situated items and administrations.

The local token \$rising will be used as a utility token with multiple use cases with absolutely no limits, and numerous benefits.

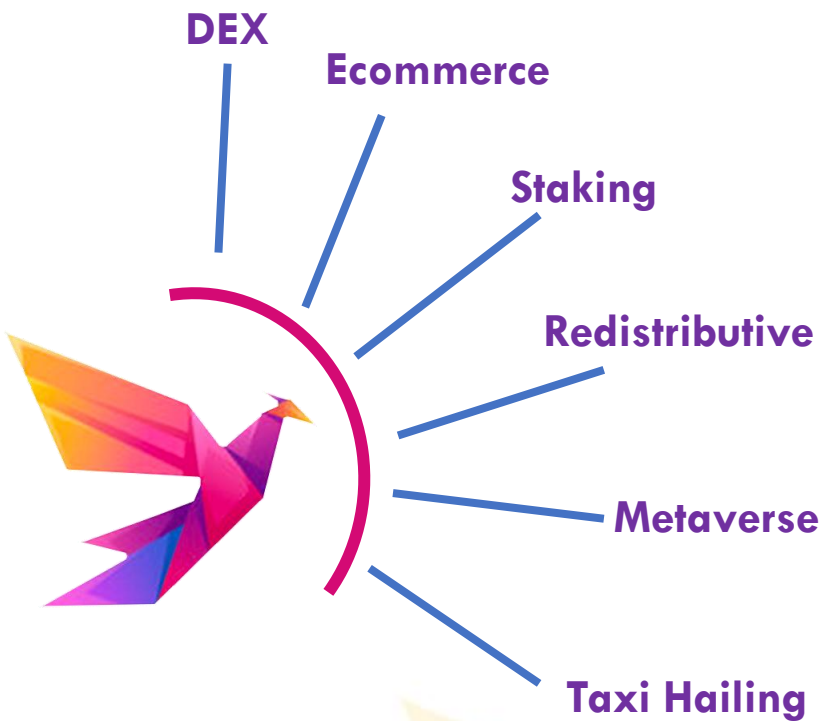

MVP FEATURES

MVP FEATURES

We imagine to smooth out the course of innovation by empowering users of blockchain technology across a brought together multivendor platform, by which they will get quality service in a straightforward, consistent way at financially savvy rates while utilizing computerized resources of their decision, without thinking twice about quality, security, and realness.

With Risingbird.co.uk, a client isn't expected to make a record on any ecommerce stage he is shopping on. Just by signing into their \$Rising Account, they can look for any thing on their beloved ecommerce commercial center and glue the connection on \$Rising payment system which will naturally submit the request for shopper once the separate sum in cryptocurrency has been stored. It is vital to take note of that the exchanges are performed on a changeless and got by trustless savvy contracts which guarantee they are delivered just once the conveyance is made.

Costs on Amazon and other ecommerce stages might show up low. Yet, this is simply because the other perspective we can contrast with is physical stores, which have gigantic expenses to keep the store open, and along these lines need to charge a touch something else for the items they sell. In any case, as referenced over, the ecommerce world has a huge load of stowed away expenses on the retailer-side that wind up getting passed to the purchaser. No store, on the web or physical, will sell an item without creating a gain. Risingbird.co.uk trusts in a plan of action that is more client situated rather than zeroed in on acquiring company gains. The stage has a way of thinking of making lives of individuals more straightforward by permitting them to shop at better rates while likewise offering them 5-10% rebate while holding 1000-2000 \$Rising Tokens.

STEP BY STEP TO USE THE ECOMMERCE PLATFORM

Sign Up

First you have to create a personalized account. You can either choose either a seller account or a buyer account category.

2/ STEP BY STEP TO USE THE ECOMMERCE PLATFORM

Set Up your Wallet

Using Risingbird ecommerce platform, you are offered a variety of wallets integrated inside the Risingbird multi wallet. Choose the cryptocurrency of your choice and make sure it has the balance you are aiming to shop for.

Search the Item you want to shop

If you are a buyer, you can choose from a huge variety of products available on your favorite eCommerce site e.g. Amazon, eBay etc. Add a specific item you want into the explorer option available at Risingbird to buy into the cart and continue on if you want to shop further.

Go to Cart and Pay Using Cryptocurrency

Once you have finalized your order, go to Cart and click on Check out. During the Check-out click on the Cryptocurrency of your choosing and Confirm.

Give Address and Receive

Provide the address and select the courier service. You will receive the item as per the duration mentioned on the website.

Smart Contracts Execute the order

Once the order has been finalized, the Smart Contracts will automatically release the earned amount to the Vendor, seller.

TAXI HAILING

Zero Commission

Shifting the focus from the existing commission-based platforms to a new subscription-based economic model

Market Dictated Pricing

A unique blockchain-enabled auction mechanism that allows drivers and riders to control their rides

Open Governance

Drivers and riders are given a voice and their right to govern themselves keeping their best interests in mind

Incentivized Participation

Blockchain-based loyalty & incentive program by using native token "\$RISING"

Franchise Opportunity

Our Franchise format has been designed to be simple and straightforward. It's all about expanding our operations globally. Here is an opportunity to partner with us and give a technological edge to your ride-hailing venture.

Open and Equitability

Involving smart contracts for transactions, administration, and overseeing stake-based administrations. Acquiring open fare calculation, dynamic evaluating, and commission-less financial settlements.

Tokenized Economy

The utility tokens are for gamifying dedication, prizes, and motivations, while stable tokens are utilized for on-chain full scale and micropayment moves. Native tokens are intended to be marked for procuring Metaverse NFTs which give the franchisee freedoms to utilize the name and arrangement of Risingtaxi

Metaverse NFT

Risingtaxi is bringing interestingly, an establishment model to the ride-hailing industry, empowered by NFT innovation. This will usher another worldview of carrying on with work in the ride-hailing industry specifically and the transportation business overall

Make Profits By Staking

Agent to Franchise proprietors - Drivers and Riders can designate their \$RISING tokens to be marked for their sake for Franchise applicants as a trade-off for a pre-concluded income share.

STAKING

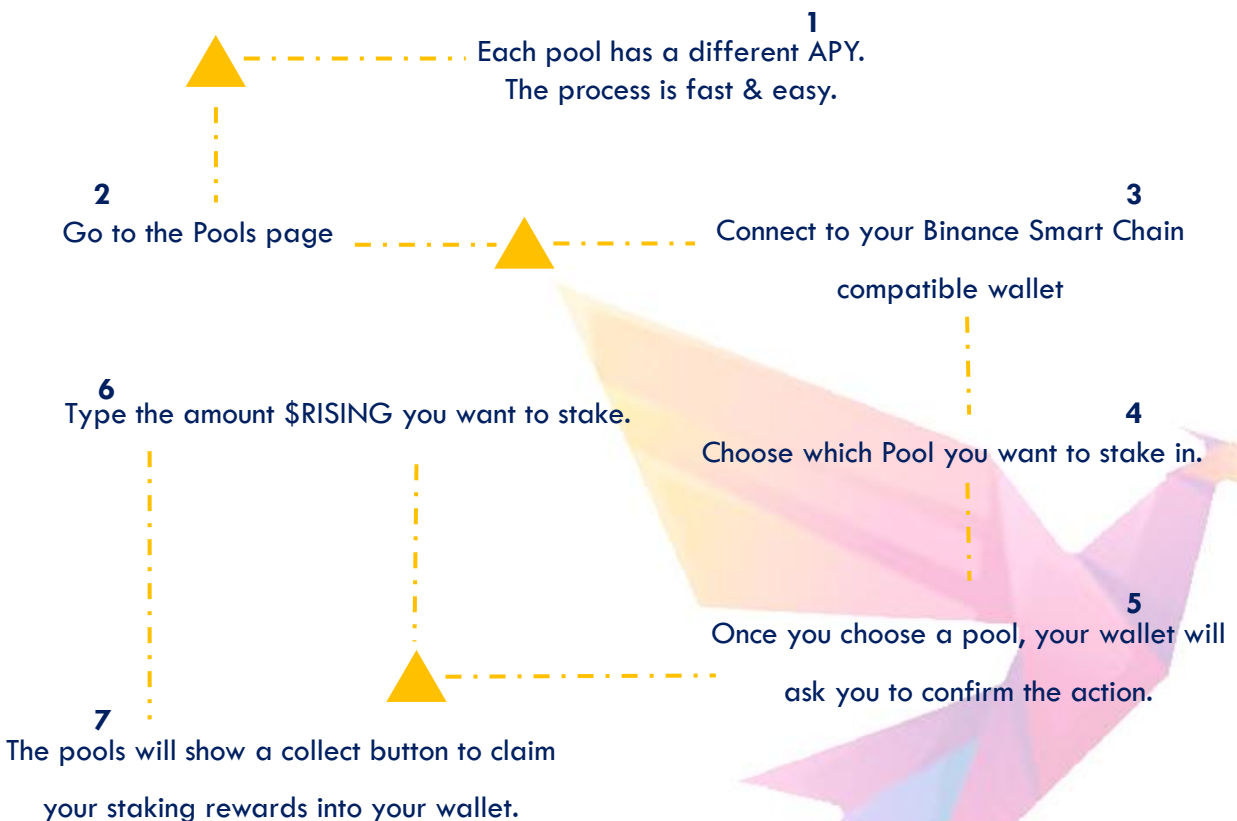

Staking is another option for crypto mining. It comprises holding cryptocurrency in an advanced wallet to help a particular blockchain network's security and tasks. By 'locking' or taking care of the cryptocurrencies, users can get staking rewards. Rather than tackling complex numerical problems to keep the blockchain secure, the Proof of Stake algorithm invigorates users to reinforce the blockchain network in return for an earning reward in crypto. This reward additionally fills in as an interest.

Ordinarily, validators are chosen to deliver the block solution in view of the size and the normal time frame it hangs on its stake. In spite of the fact that there are different capacities to forestall a front-running agreement, a bigger stake ordinarily allows clients a higher opportunity of creating the blockchain's next block. Proposed blocks by validators are then engendered to the remainder of the set, who confirm and add the blockchain's node block.

Users can generate passive income by staking their tokens

DISTRIBUTION INFORMATION

Token Name: RISING BIRD

Token Symbol: RISING

Contract Address: 0X33555617F481BE5973E93B432D8ECEA2D20524BE

It Is Important To Note That This Token Has A Redistributive Model

There will be 1% automatic redistribution mechanism on every transaction initiated with the rising bird token contract. Additionally the 1% will be evenly distributed into every wallet addresses having \$rising token in their wallets.

4% on every transaction is automatically programmed on the smart contract to provide liquidity to the project which is locked for 10 years, finally 1% on every transaction will equivalently unlock team fee.
